

REFERENCE
REGARDING USAGE OF CTECH FUEL AND OIL SYSTEMS ADDITIVES

2014-04-15

We, "Klaipeda Stevedoring Company", Ferry Terminal start using Ctech products in 2013, in our transport department (harbor trucks).

After using engine cleaner FlushAID, oil additive LubeAID, and when we started using fuel additive DieselAID we can note that – increased oil pressure (especially in old engines), reduced oil consumption, appreciably decreased smoke, reduced average fuel consumption (fuel consumption report attached). Trucks engines operation significantly rebounded, obviously increased power, although according to the technical condition of the engine has been required overhaul.

Evaluating the difference between Ctech products cost and results you can get, we recommend to use the Ctech products in accordance with the recommendations of JSC "Gevegesa" (Official Ctech distributor in Lithuania) experts.

Please find attached:

1. Fuel consumption report.
